Subject Index of Volume 67

n-Alkane
  /coal film–air bubble–water systems and froth flotation of coal: stability of, 223
Attrition
  prediction of, in continuous fluid bed system, 291
Axial transport
  of granular solids in horizontal rotating cylinders: experiments in non-flow system, 153
  theory, 145

Ball mill
  high-energy agitation: silicon nitride powder milling kinetics in, 201
Binary powder mixtures
  compressible: segregation of, subjected to tapping, 21
Brittle particulate solids
  influence of particle breakage on wall friction coefficient of: application to silo design, 249
  influence of wall inclination, normal load displacement, 237
Bubble column
  hydrodynamic and heat transfer investigations conducted in, with fine powders and viscous liquid, 265
Bubble–water systems
  coal/n-alkane film–air, systems and froth flotation of coal; stability of, 223

Circulating fluid bed
  mapping solid concentration in, using gammametry, 27
Clusters
  sedimentation of, of identical spheres: periodic motion of four spheres, 71
Coal
  /n-alkane film–air bubble–water systems and froth flotation of coal: stability of, 223
  -combustion solids, fluidized-bed: minimum fluidization velocities of, 113
Combustion
  minimum fluidization velocities of fluidized-bed coal-combustion solid, 113
Compaction
  segregation of compressible binary powder mixtures subjected to tapping, 21
Conductivity
  regular electroconductivity networks made from metal-coated plastic powders: effect of plastic particle size on conductivity, 11
Constitutive models
  for powder materials, 127

Dense particulate media
  evaluation of radiative heat transfer properties in, 137
Differential pressure measurements
  in slugging fluidized bed, 187

Electroconductivity
  regular electroconductive networks made from metal-coated plastic powders: effect of plastic particle size on conductivity, 11

Filtration systems
  probabilistic design approach for, 175
Fine grinding
  effect of grinding aids on, of limestone, quartz and Portland cement clinker, 277
Fine particles
  importance of resolution limits to interpretation of fractal descriptions of, 83
Fine powders
  and viscous liquid; hydrodynamic and heat transfer investigations conducted in bubble column with, 265
Flow characteristics
  of fluidized magnetite powder in inclined open channel, 207
Fluid bed
  circulating; mapping solid concentration in, using gammametry, 27
  continuous, system; prediction of attrition in, 291
Fluid flow
  non-Newtonian (purely viscous), through packed beds: effect of particle shape, 15
Fluidization velocities
  minimum, of fluidized-bed coal-combustion solids, 113
Fluidization velocity
  minimum; effect of operating temperature on, 217
Fluidized bed
  coal-combustion solids; minimum fluidization velocities of, 113
  effects of tube orientation and gas velocity on erosion of tube inserted into, 229
  gas-; behaviour of continuous horizontal or inclined jets introduced into: morphology of jets, 43
  slugging; differential pressure measurements in, 187
  two-dimensional; jet presence probability in, 93
Fluidized magnetite powder
  flow characteristics of, in inclined open channel, 207
Fluid–particle flow
  phase diagram and ideal sealing state for vertical moving bed, 37
Fractal descriptions
  importance of resolution limits to interpretation of, of fine particles, 83
Free-fall velocity
  simple method for estimation of, of spherical particles in power law liquids, 287
Froth flotation
  of coal and stability of coal/n-alkane film–air bubble–water systems, 223

Elsevier Sequoia/Printed in The Netherlands

Gammametry
mapping solid concentration in circulating fluid bed using, 27
Gas-fluidized bed
behaviour of continuous horizontal or inclined jets introduced into: morphology of jets, 43
Gas velocity
and tube orientation; effects of, on erosion of tube inserted into fluidized bed, 229
Granular powders
behaviour of L-valves with, 163
Granular simple shear flows
analysis of, with rate-dependent model, 1
Granular solids
axial transport of, in horizontal rotating cylinders:
experiments in non-flow system, 153
theory, 145
Grinding aids
effect of, on fine grinding of limestone, quartz and Portland cement clinker, 277

Heat transfer
and hydrodynamic investigations conducted in bubble column with fine powders and viscous liquid, 265
Holistic approach
to particle drag prediction, 57
Hydrodynamic investigations
and heat transfer investigations conducted in bubble column with fine powders and viscous liquid, 265

Jet(s)
morphology of; behaviour of continuous horizontal or inclined jets introduced into gas-fluidized bed, 43
presence probability in two-dimensional fluidized bed, 93

Limestone
and quartz and Portland cement clinker; effect of grinding aids on fine grinding of, 277
L-valves
behaviour of, with granular powders, 163

Magnetite powder
fluidized; flow characteristics of, in inclined open channel, 207
Mercury porosimetry
and effective networks for permeability calculations in porous materials, 121
Milling kinetics
silicon nitride powder, in high-energy agitation ball mill, 201
Morphology
of jets; behaviour of continuous horizontal or inclined jets introduced into gas-fluidized bed, 43

Newtonian and pseudoplastic fluids
(power-law); correlation for direct calculation of terminal velocity of spherical particles in, 87

Operating temperature
effect of, on minimum fluidization velocity, 217

Packed beds
non-Newtonian (purely viscous) fluid flow through:
effect of particle shape, 15
Particle breakage
influence of, on wall friction coefficient of brittle particle solids:
application to silo design, 249
influence of wall inclination, normal load displacement, 237
Particle drag prediction
holistic approach to, 57
Particle shape
effect of; non-Newtonian (purely viscous) fluid flow through packed beds, 15
Particle size
plastic: effect of, on conductivity; regular electroconductive networks made from metal-coated plastic powders, 11
Periodic motion
of four spheres; sedimentation of clusters of identical spheres, 71
Permeability calculations
mercury porosimetry and effective networks for, in porous materials, 121
Phase diagram
fluid–particle flow, and ideal sealing state for vertical moving bed, 37
Plastic powders
regular electroconductivity networks made from metal-coated: effect of plastic particle size on conductivity, 11
Pneumatic transport line
solids volume fraction at injection point in, 67
Porosimetry
mercury, and effective networks for permeability calculations in porous materials, 121
Portland cement clinker
and limestone and quartz; effect of grinding aids on fine grinding of, 277
Powder materials
constitutive models for, 127
Power law fluids
Newtonian and pseudoplastic; correlation for direct calculation of terminal velocity of spherical particles in, 87
Power law liquids
simple method for estimation of free-fall velocity of spherical particles in, 287
Probabilistic design approach
for filtration systems, 175

Quartz
and limestone and Portland cement clinker; effect of grinding aids on fine grinding of, 277

Radiative heat transfer properties
evaluation of, in dense particulate media, 137
Random fracture model
improved transformation technique for prediction of liberation by, 103

Rotating cylinders
axial transport of granular solids in horizontal:
experiments in non-flow system, 153
theory, 145

Sedimentation
of clusters of identical spheres: periodic motion of four spheres, 71
Segregation
of compressible binary powder mixtures subjected to tapping, 21
Shear flows
analysis of granular simple, with rate-dependent model, 1
Silicon nitride powder
milling kinetics in high-energy agitation ball mill, 201
Silo design
application to; influence of particle breakage on wall friction coefficient of brittle particulate solids, 249
Solids volume fraction
at injection point in pneumatic transport line, 67
Spherical particles
correlation for direct calculation of terminal velocity of, in Newtonian and pseudoplastic (power-law) fluids, 87
sedimentation of clusters of identical spheres: periodic motion of four spheres, 71
simple method for estimation of free-fall velocity of, in power law liquids, 287

Terminal velocity
correlation for direct calculation of, of spherical particles in Newtonian and pseudoplastic (power-law) fluids, 87

Wall friction coefficient
influence of particle breakage on, of brittle particulate solids:
application to silo design, 249
influence of wall inclination, normal load displacement, 237

Erratum

Powder Technology, 66 (1991) 265–280

The compaction behaviour of particulate materials. An elucidation based on percolation theory

L. E. Holman
(King of Prussia, PA, U.S.A.)
